

1.Create a P-T-S VPN and attach a VM to it

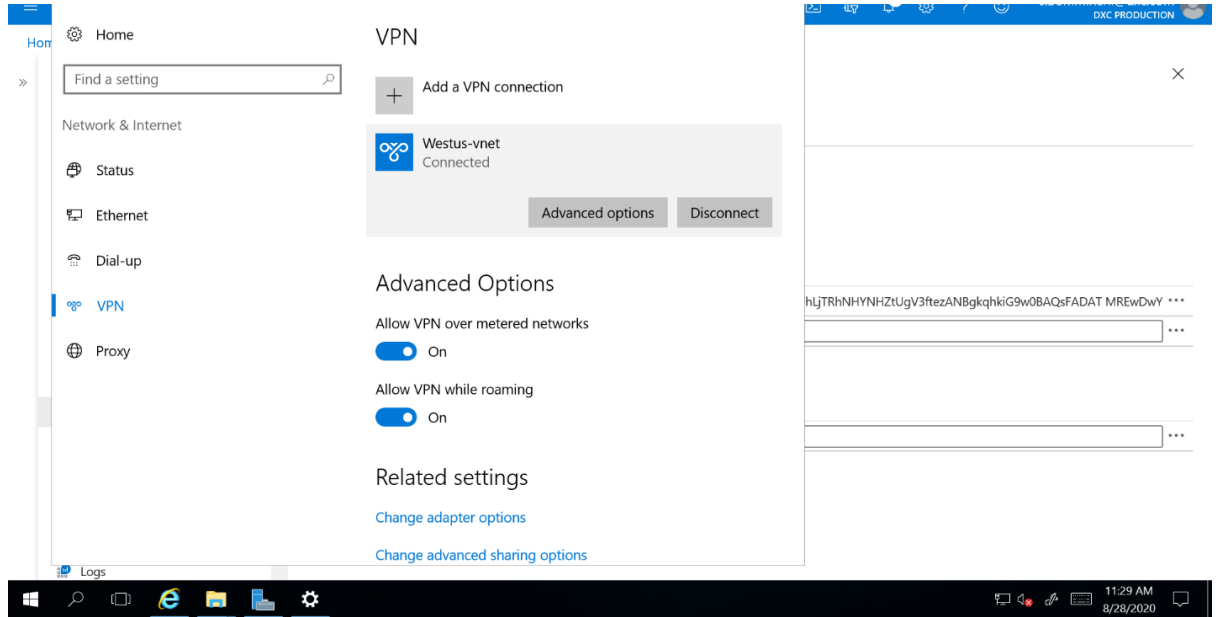

To create a point to site VPN connection we need to create a Virtual network Gateway.

- I have created Vnet and Virtual machine and I have created a VPN, ROOT and CLIENT certificates. I have connected to that VM and I gave CLIENT certificate to that VM.

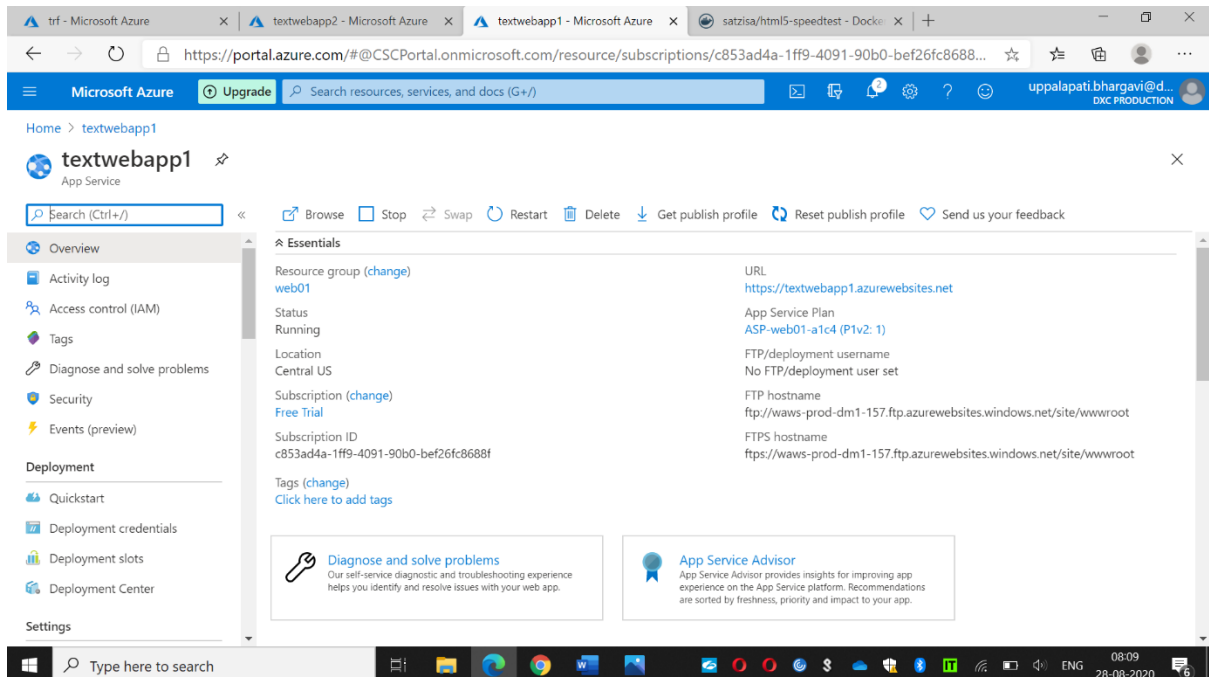

- I have downloaded VPN client in VM and connected to the VPN.

- In the local host we connect the vpn client.

2.create a two web application in west us and central Us then attach to the traffic manager with Priority routing method

- We have to create Two web apps one is textwebapp1 and another one is textwebapp2.

Here, textwebapp1 is located in central us location and textwebapp2 is located in westus location.

Home > Microsoft.Web-WebApp-Portal-3a06da43-8224 > textwebapp2

textwebapp2

 - Deployment Center

- To do the **priority routing** method we need a traffic manager profile.
- So, create a traffic manager profile.
- And then two webapps are attached to traffic manager with priority routing method.

3.create a windows server with AD installed and integrate with Azure AD

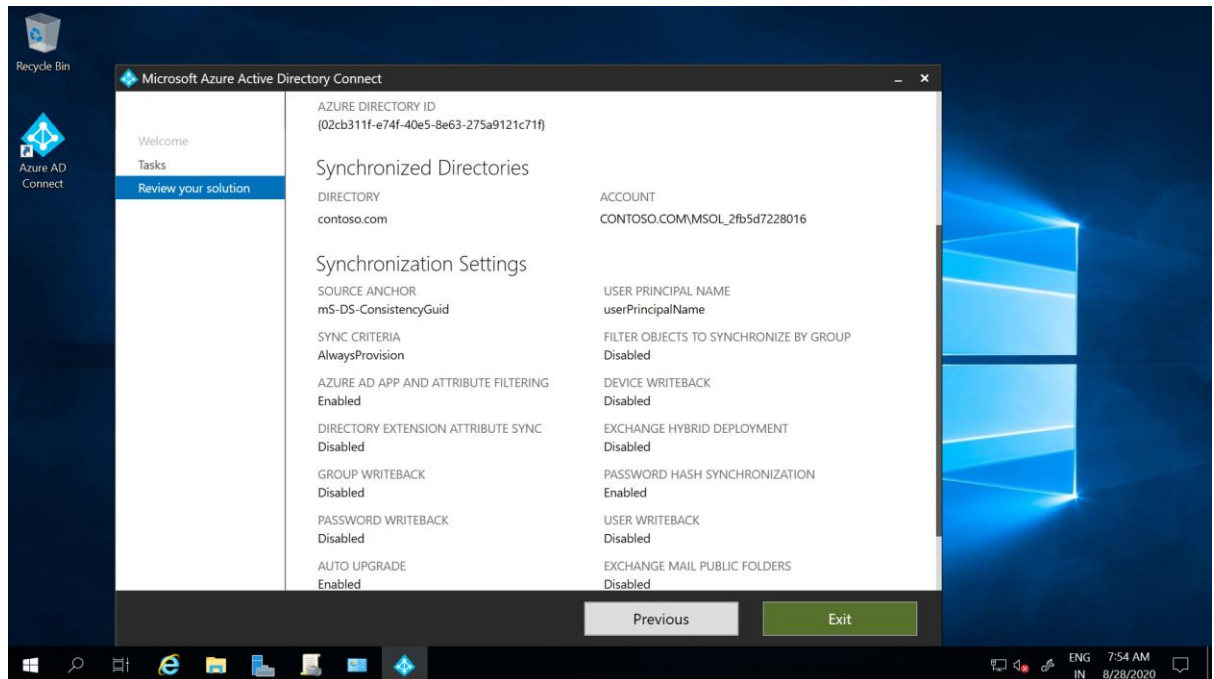

- An Active Directory (AD) Role is Assigned to a Server and it access to the on premises networks

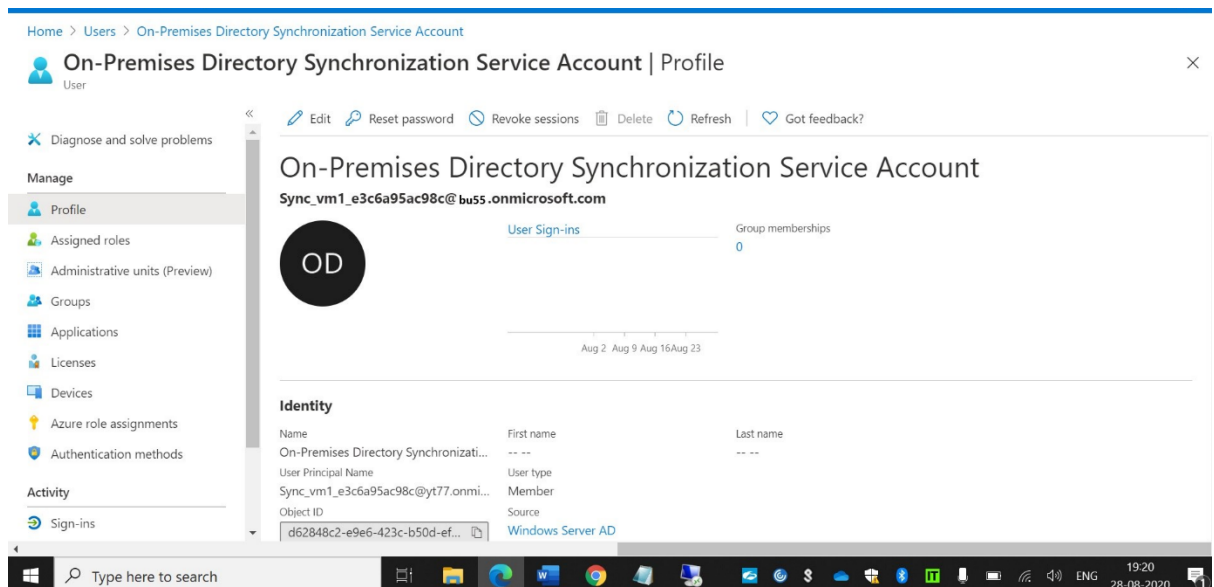

- I am Installing the Active Directory services in that Server

- Shown below the Azure AD Connect

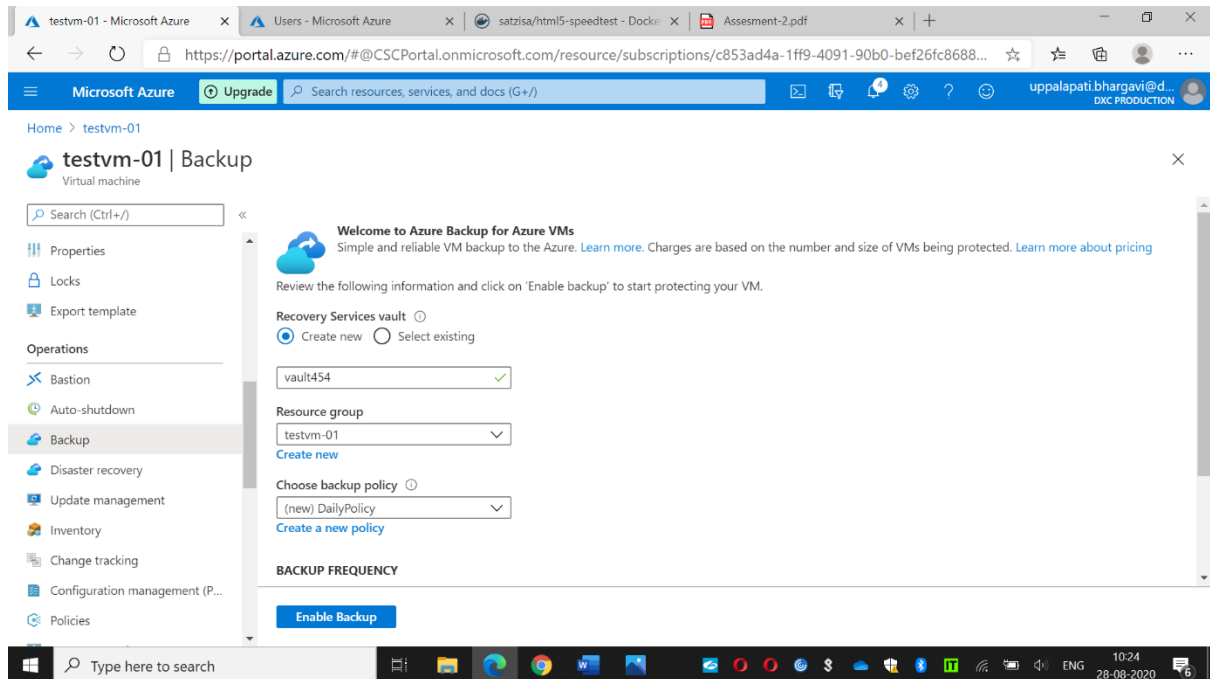

- On premises Active Directory is synced to Azure Active Directory

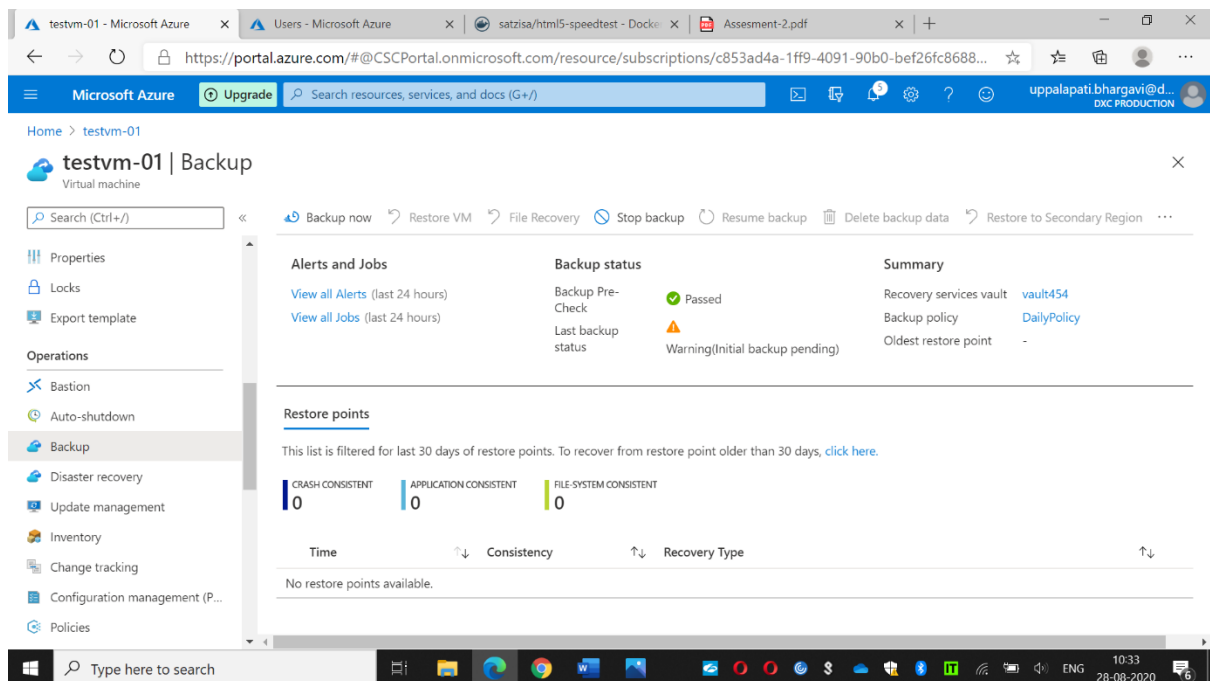

4.configure a backup to the VM you installed AD

- To configure a backup to the vm

- This is a Backup configured in vault

5.configure alerts for the VM:

- In a Virtual machine we configure the alerts.

Create alert rule - Microsoft Azure

https://portal.azure.com/#@CSCPortal.onmicrosoft.com/resource/subscriptions/c853ad4a-1ff9-4091-90b0-bef26fc8688...

Microsoft Azure Upgrade Search resources, services, and docs (G+)

Enable alert rule upon creation ☒

Create alert rule

- In a virtual machine we created an alert rule.
- Here the Alert is created for **inbound Traffic flows** for the vm

Create alert rule - Microsoft Azure

https://portal.azure.com/#@CSCPortal.onmicrosoft.com/resource/subscriptions/c853ad4a-1ff9-4091-90b0-bef26fc8688...

Microsoft Azure Upgrade Search resources, services, and docs (G+)

Home > testvm-01 >

Create alert rule

Rules management

Create an alert rule to identify and address issues when important conditions are found in your monitoring data. [Learn more](#)

When defining the alert rule, check that your inputs do not contain any sensitive content.

Scope

Select the target resource you wish to monitor.

Resource

testvm-01

Edit resource

Hierarchy

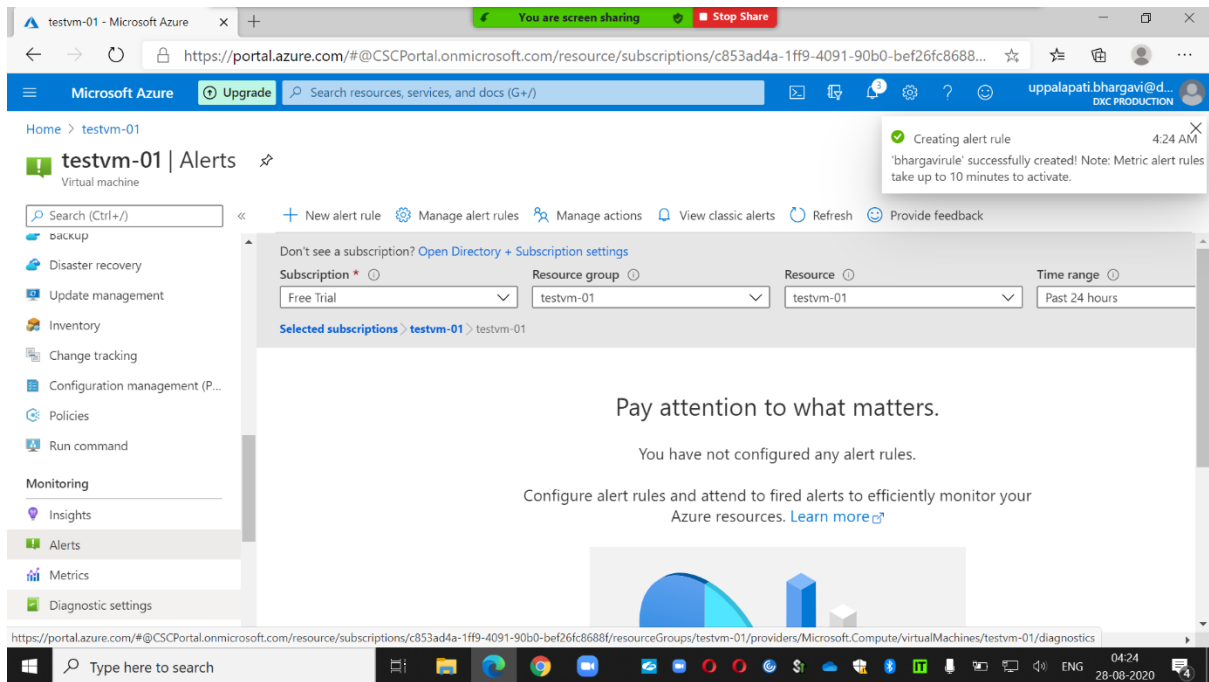

Free Trial > testvm-01

Condition

Configure when the alert rule should trigger by selecting a signal and defining its logic.

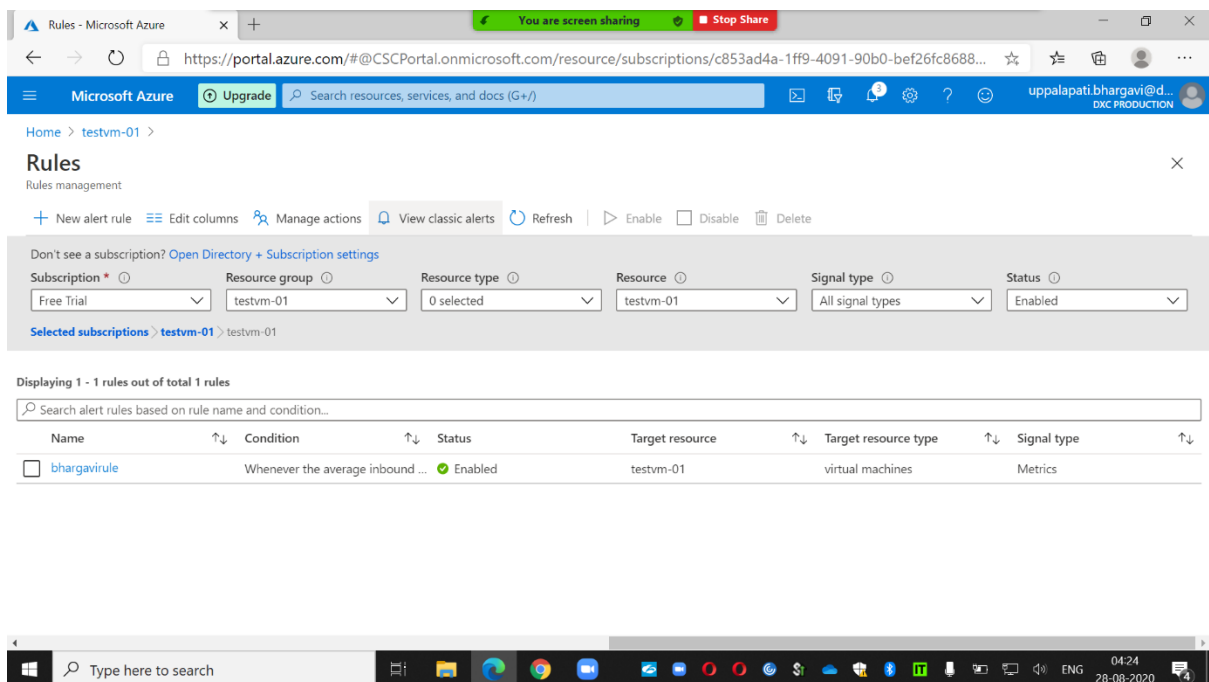

Condition name	Time series monitored	Estimated monthly cost (USD)
<input checked="" type="checkbox"/> Whenever the average inbound flows is greater than 1 count	1	\$ 0.10

Create alert rule

Here shown that , successfully created the alert rule in the vm.

And we can show that alert rule.

6. Apply any security policy to the subscription

- To apply the security policy we need to access the **security center** in azure .
- it specifies the subscription and A custom Initiative is to be added to that one.

To Creating a initiative definition:

Initiative definition - Microsoft Azure | Home - Microsoft Azure | satzisa/html5-speedtest - Docker | +

https://portal.azure.com/#blade/Microsoft_Azure_Security/SecurityMenuBlade/1
